Meta's Gallatin Data Center

The Gallatin Data Center is part of Meta's global infrastructure that brings our technologies and services to life.

$1.5B+
Data center investment
in Tennessee

2020
Broke ground on the
Gallatin Data Center

100+
Operational
jobs supported

1,100
Skilled trade workers on site at
peak construction

$1.4M+
Direct funding to Sumner County-
area schools and nonprofits

70+
Grants and sponsorships
provided locally since 2021

We prioritize sustainability

Meta's goal is to be water positive in 2030, where we restore more water than we consume.

Our data centers' electricity use is matched with 100% clean and renewable energy, and our global operations have reached net zero emissions.

Meta-supported projects are adding 530 megawatts of new renewable energy in Tennessee.

Meta's global fleet of data centers supports our technologies that empower more than 3 billion people around the world to share ideas, offer support and make a difference.

Partnering with Tennessee

We are committed to supporting the community through sourcing labor and materials locally where we can, volunteering, partnering with local chambers, and supporting local schools, nonprofits and community projects.

Supporting local schools and nonprofits

We support the community through our annual Data Center Community Action Grants program and other direct funding for projects that put the power of technology to use for community benefit, give people the power to build strong, sustainable communities, and improve STEAM education.

Prioritizing sustainability

Meta approaches sustainability from the ground up — from design and construction to operations — by prioritizing energy efficiency and renewable energy, water stewardship, and responsibly managing the end of life of our equipment. Our operational data center buildings achieve LEED® Gold certification by focusing on efficiency, sustainability and innovation. We worked with Tennessee Valley Authority to meet our 100% clean and renewable energy goal for the Gallatin Data Center. This includes supporting eight new solar projects in Tennessee and creating an innovative renewable energy program that is available to other customers looking to meet their renewable energy goals.

Minimizing water use

We are proud to build some of the most sustainable data centers in the world and prioritize on-site water efficiency.

The Gallatin Data Center:

- Uses cooling technology that is significantly more water efficient than the industry standard.
- Reuses water numerous times before discharging it as wastewater.
- Is landscaped with native vegetation where possible to reduce irrigation demands.
- Captures and infiltrates rainwater on site.
- Utilizes water-saving fixtures and technologies within data center facilities.
